**Colorless, Directionless ROADM for 50GHz and 100GHz Grid**

The PL-1000RO offers ROADM functionality based on advanced next generation wavelength-selective switch (WSS) technology.

The solution offers highly flexible wavelength routing capabilities suitable for mesh, ring, linear add/drop, core and edge DWDM network topologies. The PL-1000RO supports colorless, directionless and both 50GHz and 100GHz grids.

**Main Benefits**

- Power monitoring for all channels and automatic power balancing
- Supports optional embedded EDFA booster/preamp
- Optional internal 4/8 mux/demux, DCM and band splitters
- Embedded optical supervisory channel (OSC) for remote management
- User-friendly NMS to deploy new services, control and monitor the optical network

---

**Flexibility in Services over the Same Fiber**

The user configures the PL-1000RO dynamically to add/drop selected wavelengths at any node in the network and can seamlessly change the network node capacity as needed. The device automatically equalizes and balances the power of the added and bypassed wavelengths.

The PL-1000RO simplifies network management and reduces operation costs (OPEX) by allowing fast deployment of new wavelengths remotely.

The ROADM fully integrates with PacketLight’s WDM product line.

**Recommended for the following applications:**

- Configuration and management of mesh and ring-based DWDM network architecture
- Wavelength routing for mesh, ring, linear add/drop, core and edge DWDM network topologies
- Wavelength power balancer in amplified links
- Network management by remotely deploying new wavelengths
